

IGr V1 Pricing Architecture & Subscription System

Developer Product Specification

Products

IGr operates through two connected but independently monetised platforms:

1. IGr Academy — igr.academy

Free discovery, resource and trust-building platform with APPU AI Assistant.

2. APPU AI — appuai.online

Standalone AI-powered personal learning platform with freemium and subscription access.

The pricing architecture must support:

- Free-forever acquisition
 - Monthly subscriptions
 - Annual subscriptions
 - Annual savings
 - Premium personalised solutions
 - Future AI usage flexibility
 - Hyper-personalisation
 - Adaptive learning
 - Token/model cost management
 - Easy upgrades
 - Separate student, faculty and institutional products
-

1. Core Pricing Philosophy

Do **not** position APPU as a generic AI chatbot or AI tutor.

The product is positioned as:

An AI That Learns How You Learn.

The commercial model is:

Free Access → Personalisation → Adaptive Intelligence → Premium Transformation

The system should become increasingly valuable as it learns about the user.

The long-term moat is:

Personalisation + Learning Memory + Adaptive Learning Loop + Behavioural Intelligence + Storytelling + Gamification.

2. Pricing Toggle Requirement

The pricing page must have a prominent toggle:

MONTHLY | ANNUAL

Default selection:

ANNUAL — Recommended

Annual plans should clearly display:

- Monthly equivalent price
- Total annual price
- Savings compared with monthly billing
- Percentage saved
- “Best Value” or equivalent visual treatment for the recommended plan

Example:

₹499/month

Toggle to Annual:

₹4,999/year

₹417/month billed annually

Save ₹989 — 16%

3. Student Pricing Plans

APPU FREE

₹0 — Forever

No credit card required.

Includes

- Access to selected DIY resources
- Free AI tools / CustomGPT
- Limited APPU AI interactions
- Basic learning discovery
- Selected challenges
- Selected gamified experiences
- Sample personalised recommendations
- Limited learning memory
- Access to free Academy resources

Purpose

This is the acquisition and trust-building layer.

The free version must provide genuine value.

It should not feel deliberately crippled.

The upgrade trigger should be:

Unlock an APPU that knows you better and adapts to you.

4. APPU EVOLVE

Monthly

₹499/month

Annual

₹4,999/year

Equivalent

₹417/month

Savings

Monthly billing for 12 months:

$₹499 \times 12 = \text{₹}5,988$

Annual price:

₹4,999

User saves

₹989/year

Discount

Approximately 16%

Includes

- Persistent learner profile
- Personal learning preferences
- Extended AI access
- Personalised recommendations
- Adaptive learning paths
- Story-driven explanations
- Gamified learning
- Weekly missions
- Reflection loops
- Personalised quizzes
- Basic learning analytics
- Multi-language support
- Continuous product upgrades

Positioning

Your AI Learning Partner.

5. APPU EVOLVE+

Recommended Plan

This should receive the strongest visual emphasis on the pricing page.

Monthly

₹999/month

Annual

₹9,999/year

Equivalent

₹833/month

Savings

Monthly billing for 12 months:

$₹999 \times 12 = \text{₹}11,988$

Annual price:

₹9,999

User saves

₹1,989/year

Discount

Approximately 17%

Includes Everything in EVOLVE, Plus:

- Advanced hyper-personalisation
- Deeper learner memory
- Adaptive learning intelligence
- Dynamic learning paths
- Strength identification
- Learning gap detection
- Motivation-aware learning
- Personalised missions
- Advanced storytelling modes
- Advanced gamification
- Personalised challenges
- Project-based learning
- Personal portfolio support
- Goal-based learning journeys
- Career exploration
- Parent insights
- Advanced progress intelligence
- Priority access to new features

Positioning

Your Personal AI Learning System.

Badge

MOST POPULAR

or

BEST VALUE FOR SERIOUS LEARNERS

6. APPU GENESIS

This is a high-touch hybrid AI + guided personalisation plan.

It does not need to be heavily promoted on the primary pricing page initially.

It can be available through:

“Need deeper personalisation?”

Monthly

₹2,499/month

Annual

₹24,999/year

Equivalent

₹2,083/month

Savings

Monthly billing for 12 months:

$₹2,499 \times 12 = \text{₹}29,988$

Annual price:

₹24,999

User saves

₹4,989/year

Discount

Approximately 17%

Includes Everything in EVOLVE+, Plus:

- Deep personalisation onboarding
- Personal Learning DNA setup
- Individual learning blueprint
- Personal goals architecture
- Custom learning missions
- Advanced APPU configuration
- Personal project pathways
- Parent onboarding
- Monthly learning intelligence reports

- Regular recalibration
- Priority support
- Early access to advanced AI features

Positioning

Built Around How You Learn.

7. APPU SIGNATURE

This is not a standard SaaS plan.

This is a **premium customised AI learning solution.**

Recommended Pricing

Monthly Equivalent Model

From:

₹4,999/month

With a minimum commitment period if required.

Annual

Starting from ₹49,999/year

Higher customisation levels can go to:

₹74,999/year

or

₹99,999/year

depending on:

- Human involvement
- Custom setup

- Number of specialised AI workflows
 - Parent guidance
 - Learning strategy
 - Personal projects
 - Advanced models
 - Premium AI usage
-

Optional One-Time Setup Fee

For deeply customised implementations:

₹9,999–₹24,999

The exact setup fee should depend on the customisation level.

Includes

Everything in GENESIS, plus:

- Deep learner discovery
- Personal Learning DNA
- Custom APPU intelligence configuration
- Individual AI system setup
- Personal growth architecture
- Academic + skills roadmap
- Interest-based learning
- Personal projects
- Portfolio pathway
- Career exploration
- Parent strategy session
- Priority human guidance
- Continuous system optimisation
- Premium AI capabilities
- Advanced personalisation

Positioning

Your Personal AI Learning Architecture.

CTA

Apply for Signature

Do not show a simple “Buy Now” button.

The system should lead to:

1. Application
 2. Learner discovery
 3. Personalisation assessment
 4. Recommended solution
 5. Payment
-

8. Recommended Public Pricing Page

Do not display too many plans initially.

The primary public page should show only:

Plan	Monthly	Annual	Savings
FREE	₹0	₹0	—
EVOLVE	₹499	₹4,999	₹989
EVOLVE+	₹999	₹9,999	₹1,989
SIGNATURE	From ₹4,999	From ₹49,999	Custom

The GENESIS plan can be offered contextually as an upgrade.

This reduces decision fatigue.

9. Pricing Toggle Behaviour

When MONTHLY is Selected

Display:

EVOLVE

₹499

per month

EVOLVE+

₹999

per month

SIGNATURE

From ₹4,999

per month

When ANNUAL is Selected

Display:

EVOLVE

₹4,999/year

₹417/month

Save ₹989

EVOLVE+

₹9,999/year

₹833/month

Save ₹1,989

SIGNATURE

From ₹49,999/year

Custom onboarding and personalisation included according to the selected solution.

10. Recommended Toggle UI

MONTHLY ANNUAL
SAVE UP TO 17%
[○ ————— •]

Annual should be visually highlighted as the recommended option.

Suggested microcopy:

Pay annually. Save more. Grow longer.

Alternative:

Choose Annual. Unlock More Value.

11. Pricing Card Structure

Every pricing card should follow the same hierarchy.

1. Plan Name

Example:

APPU EVOLVE+

2. Transformation Statement

Your Personal AI Learning System

3. Price

₹999/month

or

₹9,999/year

4. Savings

Annual plan:

Save ₹1,989/year

5. CTA

Examples:

- Start Free
- Start Evolving
- Personalise My APPU
- Apply for Signature

6. Key Outcomes

Avoid long feature lists.

Focus on outcomes.

Example:

- APPU remembers how you learn
- Your learning path adapts
- Learn through stories and challenges
- Discover strengths and gaps
- Turn learning into progress

12. Future-Proof AI Usage Architecture

The system must not promise technically unlimited access without internal controls.

Internally, every plan should have a configurable:

AI Usage Policy Layer

The user should experience value-based access.

The backend should manage:

- Token consumption
- Model selection
- Rate limits
- Daily/monthly usage
- Premium model access
- Voice usage
- Image usage
- Video usage
- Deep reasoning usage
- Agent workflows

The pricing system must allow these limits to be changed without redesigning the entire subscription structure.

13. Model Routing Strategy

APPU should not depend permanently on one AI model.

The backend architecture should support:

USER

APPU INTELLIGENCE LAYER

MODEL ROUTER

- ├── Low-cost model
- ├── Standard model
- ├── Premium reasoning model
- ├── Voice model
- ├── Vision model
- └── Future specialised education models

The APPU intelligence and personalisation layer should remain independent of the underlying LLM.

This allows the platform to:

- Reduce token cost

- Replace expensive models
 - Use open-source models
 - Route simple tasks to cheaper models
 - Reserve premium models for complex tasks
 - Introduce future AI capabilities without changing the product structure
-

14. AI Credits Architecture

Recommended for Version 1.1 or Version 2.

Do not initially confuse users with token counts.

Instead introduce:

APPU POWER

or

APPU CREDITS

Use these only for high-cost AI activities.

Examples:

- Advanced reasoning sessions
- Premium voice conversations
- Deep document analysis
- Advanced research
- Special AI agents
- Image generation
- Video generation
- Advanced simulations

Basic learning interactions should remain included within subscription access.

The future model:

SUBSCRIPTION

+

PREMIUM AI CAPABILITIES

15. The Core Personalisation Moat

The platform should progressively build a unique:

LEARNER INTELLIGENCE GRAPH

Each student should have an evolving intelligence profile containing:

Learning Profile

How the student learns.

Knowledge Profile

What the student knows.

Gap Profile

What needs improvement.

Behaviour Profile

Patterns of engagement and learning.

Motivation Profile

What makes learning engaging.

Story Profile

Stories, examples, characters and contexts that resonate.

Language Profile

Preferred language and communication style.

Goal Profile

Academic, personal and future aspirations.

Growth Profile

How the learner evolves over time.

16. The Personalisation Compounding Effect

This is a core product principle.

MORE INTERACTION

MORE LEARNER UNDERSTANDING

BETTER PERSONALISATION

BETTER LEARNING EXPERIENCE

MORE ENGAGEMENT

MORE INTERACTION

This creates a self-improving loop.

The objective is:

The longer a student uses APPU, the more valuable APPU becomes.

This creates a natural retention and switching-cost moat.

A competing AI may have a more powerful model.

But it does not automatically have:

- The learner's history
- Learning patterns
- Motivation triggers
- Strength evolution
- Knowledge gaps
- Personal learning journey

The intelligence accumulated around the learner becomes the differentiator.

17. Premium Solution Architecture

For Signature users, the onboarding flow should be:

APPLICATION

LEARNER DISCOVERY

PERSONALISATION ASSESSMENT

LEARNER INTELLIGENCE PROFILE

PERSONAL LEARNING BLUEPRINT

CUSTOM APPU CONFIGURATION

PERSONAL AI LEARNING JOURNEY

CONTINUOUS ADAPTATION

This transforms the premium offering from:

“More AI access”

into:

A Custom-Built Learning Intelligence System

18. Separate Faculty Product

Faculty should not be included inside the student pricing system.

Create a separate product category:

APPU FOR EDUCATORS

Suggested Version 1 pricing:

Plan	Monthly	Annual
Faculty Starter	₹499	₹4,999
Faculty Pro	₹999	₹9,999
Faculty Signature	From ₹2,499	From ₹24,999

Faculty capabilities can include:

- Personal AI assistant
- Teaching workflow support
- Content creation
- Assessment support
- Student personalisation assistance
- AI productivity
- Knowledge-base integration
- Custom teaching workflows

Faculty personalisation must remain independent from student subscriptions.

19. Institutional Product

This should be developed as a separate product rather than bundled into student subscriptions.

Suggested product:

IGr Intelligence OS

The pricing architecture should support separate billing components:

Platform License

Annual institutional access.

Setup Fee

Initial implementation and onboarding.

Customisation Fee

Institution-specific workflows and AI assistants.

Per-User License

Students and/or faculty.

AI Usage Layer

Where applicable.

Training & Enablement

Faculty and administration.

Administration Intelligence

Analytics, governance and controls.

This allows the B2C platform to evolve quickly without institutional requirements slowing down the core product.

Core Product Principle for the Development Team

The platform should never be architected as a simple:

Chatbot + Subscription

It should be built as:

**Learner Intelligence + Personalisation Engine + Adaptive Learning
Loop + AI Agent + Gamification + Storytelling + Memory.**

The underlying AI models will change.

Token prices will change.

New competitors will emerge.

AI capabilities will become commoditised.

The durable asset should therefore be the evolving intelligence built around each learner.

The core strategic objective of Version 1 is:

Every interaction should help APPU understand the learner better and improve the next learning experience.

That is the foundation for IGr's long-term moat and pricing power.
